

CRYOFAN CF-04

Cryogenic blower for local cryotherapy

CRYOFAN CF-04 is smaller than its recently developed counterpart. Manufactured since 2015, this cryogenic blower has proved its efficiency and reliability.

Main advantages of CRYOFAN CF-04 include simple design, easy handling, low weight and quiet operation. In less than six minutes the blower's temperature reaches -100°C needed to start a treatment. A ten-minute session takes only 0.75 l of liquid nitrogen, which makes the device one of the most efficient in the market.

CRYOFAN CF-04 operates from a 35-liter unpressurized Dewar tank identical to those used in any Dewar-type cryosauna. This is a good option to complement whole-body cryotherapy with local cryotherapy treatments. Operating a cryogenic blower does not require any specific medical certification making it extremely easy and convenient to use.

Pay attention that a Dewar is not provided with CRYOFAN CF-04. It is recommended to buy both unless you have an extra tank from a cryosauna. A Dewar tank comes with a wheeled platform for better mobility.

Delivery set includes:

CRYOFAN CF-04 with a hose and a storage rack (no Dewar tank).

Options:

10-liter Dewar tank -----	€750
35-liter Dewar tank -----	€1,050
50-liter Dewar tank -----	€1,500
